

CCR Approved Signals - Here are the main signals that are used while group riding. These are used in addition to electronic signals. The Ride Captain will initiate the signals and all riders will pass back the signal to ensure all riders are aware of the Ride Captain's signal.

Left Turn
Arm extended straight out to the left

Right Turn
Arm extended out up at 90° thumb out

Slow Down and Stop
Arm down at 45° with palm facing backwards

Single File
Arm extended over head with index finger pointed up

Staggered Formation
Arm extended over head - 2 outer fingers extended

Tighten Formation
Arm extended up over head - open and close hand

Hazard Left
Extend left leg out at 45°

Hazard Right
Extend right leg out at 45°

Slippery Condition
Extend left arm out 45° move hand in a circular motion

Turn your Signal off
Hand down at 45°, open and close fingers to thumb

Emergency Stop
Tap top of helmet with a closed fist

Leaving Group
Tap top of helmet with an open hand

Notes:

1. Many bikes have large saddle bags or you may be carrying a passenger. This means it can be difficult for the riders behind you to see the signal if you do not extend your arm out far enough
2. Only signal if it is safe and if you are comfortable doing so. Your Ride Captain will explain during pre ride briefings.
